Fax/Copy

If you have a telephone line just for receiving faxes, we recommend the following setup.

Example: One telephone line is used for voice calls and a separate telephone line for faxes. If someone sends a fax to Line 2, the fax machine will ring.

Receiving Faxes

Setting the ring count in the FAX ONLY mode

This setting determines the number of rings before the unit answers a call in the FAX ONLY mode. You can choose from 1 to 5 rings. If you use the unit with an answering machine (p. 65–67), select “5 EXT.TAM”.

Helpful hints:

- To answer a call before the unit does, increase the number of rings.

Distinctive Ring service (ring pattern detection feature)

This feature can only be used when you subscribe to a Distinctive Ring service from your telephone company. For more information on the availability of this service, contact your telephone company.

This feature will work regardless of the AUTO ANSWER or receive mode settings.

What is a Distinctive Ring service?

A Distinctive Ring service will give you up to 3 telephone numbers on a single telephone line, each having a different ring pattern.

Ring patterns:

Standard ring (one long ring)	
Double ring (two short rings)	
Triple ring (short-long-short rings)	
Other triple ring (short-short-long rings)	

If you subscribe to a Distinctive Ring service, you can assign telephone numbers for personal numbers, business numbers, fax numbers, and so on.

When a call is received, you will know which number is being called by the ring pattern.

Example:

Your telephone number	Ring pattern	Use
012 1234	Standard ring	Personal
012 5678	Double ring	Business
012 9876	Triple ring	Facsimile

Using one of the telephone numbers as a facsimile number

Program the ring pattern assigned to the facsimile number (see next page).

When the unit detects a call matching the selected Distinctive Ring pattern, it will activate the fax function.

TEL/FAX mode --- --- (receiving voice calls with rings and fax calls without rings when you are near the unit)

Use this mode when you are always near the unit, are not using an answering machine and want the fax machine to detect faxes without ringing. When a call is received, the unit will work as follows. If you have an extension telephone connected, see next page.

* A telephone fee will be charged to the caller from this point.

** A fax calling tone is automatically generated by the sending fax machine. Some fax machines do not have this capability.

*** While ringing, the unit will emit a different ring back tone to the calling party.

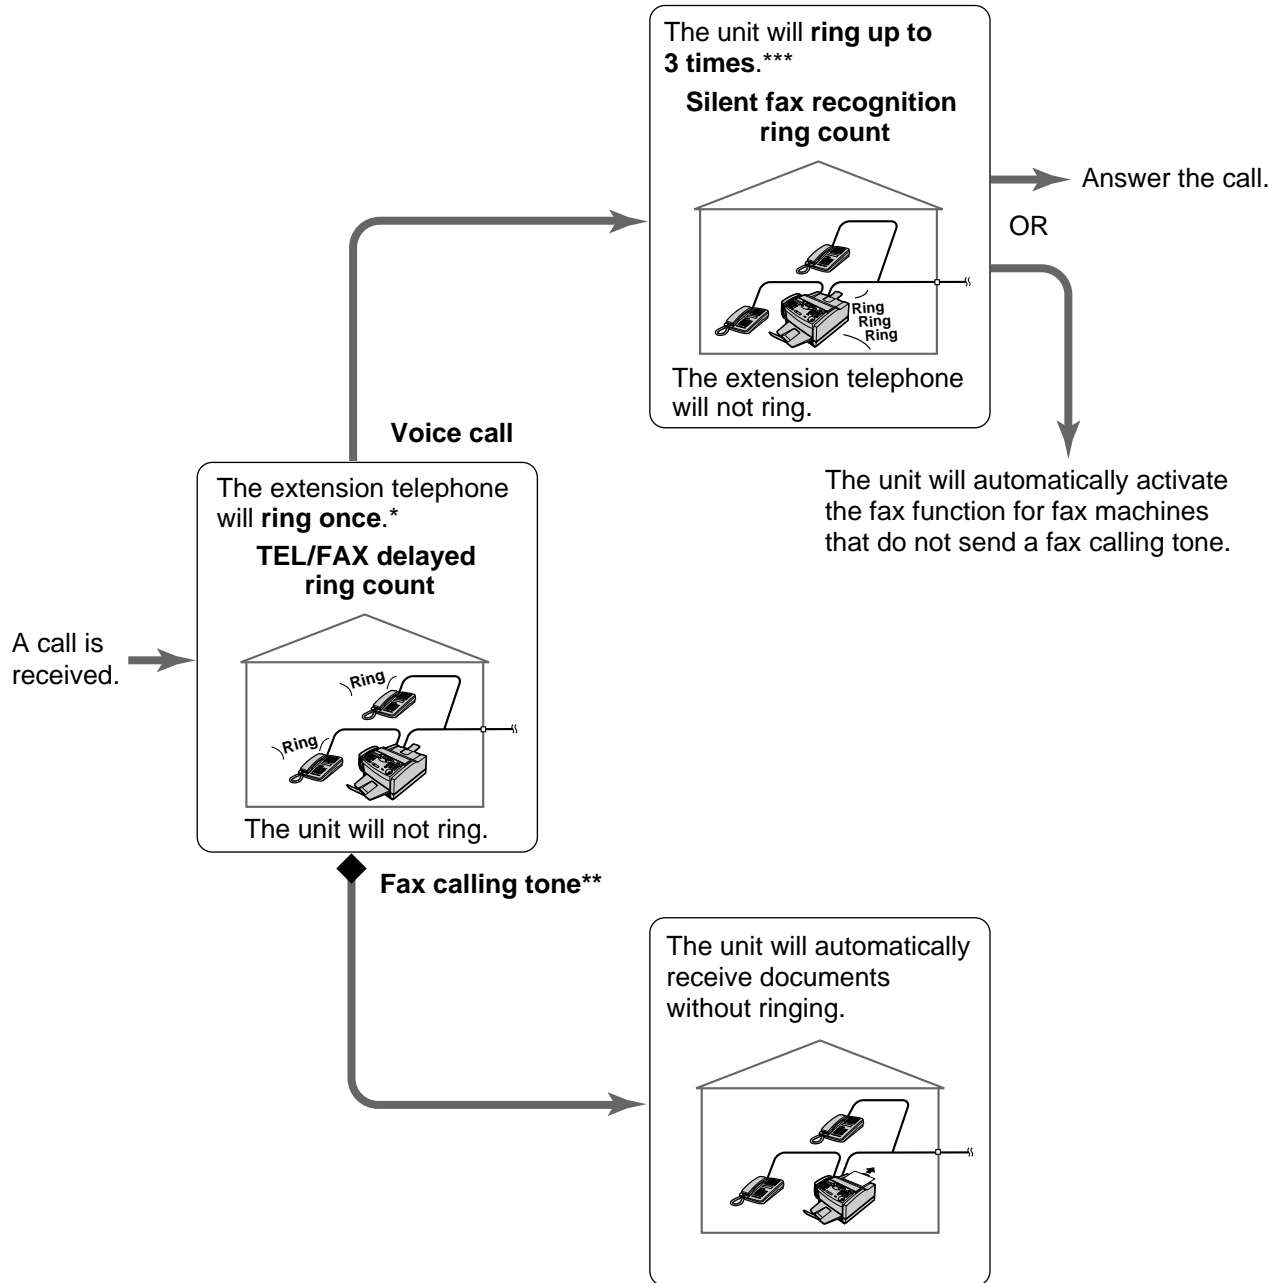

Note:

- The unit will display the following when a call is received.

Display: INCOMING CALL

- Some fax messages that are transmitted manually may not send a fax calling tone. These calls must be received manually.
- The ringer should be on (p. 33).

Ring pattern when an extension telephone is connected

TEL/FAX delayed ring count:

Up to 4 ring signals will be generated before the unit answers, depending on feature setting #78 on page 73. In the TEL/FAX mode, the unit will not generate an audible ring during this time.

Silent fax recognition ring count:

The unit generates audible rings to indicate that it is receiving a voice call. 3 to 6 rings will be generated, depending on feature setting #30 on page 73. This signal will not ring at an extension telephone.

Printing using the paper tray (manual feeding) ==

Using the printing manual feed, you can print on media other than letter or legal size plain paper.

Media you can print on

■ Media size

Media	Size	Dimension
Paper	Letter	216 mm×279 mm (8½"×11")
	Legal	216 mm×356 mm (8½"×14")
	A4	210 mm×297 mm

■ Paper weight

60 g/m² to 105 g/m²
(16 lb. to 28 lb.)

Loading a sheet manually

Important:

- You cannot load two or more sheets at one time.

- 1 Close the paper tray extender.
- 2 Press **START/SET/COPY** and confirm the following message.

Display: READY TO PRINT

Note:

- Manual feeding is not available for receiving or copying documents.
- Do not load a sheet while the unit displays the following message.

Display: PLEASE WAIT

- If you load another paper on the paper tray when the fax machine is feeding the paper, a paper jam may occur. When you print two or more sheets, place a next sheet one by one after confirming the message indicating to insert a sheet on your PC.
- If printing is not performed for 20 minutes after loading a sheet on the paper tray, the sheet will automatically be ejected.
- Please read a README file (README.WRI) in the CD-ROM for more information.

Transparencies and labels

You may also print on labels and transparencies that are made for the printer. Panasonic has tested and found that the following work satisfactorily.

Transparencies	3M CG3300, 3M CG5000
Labels	Avery 5160, Avery 5161, Avery 5162 Avery 5163, Avery 5164, Avery 5165, Avery 5167, Avery 5168 Xerox LWH100, Xerox LWH110, Xerox LWH120 Xerox LWH130, Xerox LWH140

Note:

- With any label, the labels must completely cover the backing material (see below).
- Re-using transparencies that have been fed through the printer once (for example, after jams or if the transparency is ejected without being printed) can reduce the life of the consumables and paper path components.
- Some types of paper, especially transparencies are made to print on a specific side. If the print quality is poor, try printing on the other side.

Envelope specifications

We recommend that you purchase only high quality envelopes with diagonal seams, as shown in the diagram below:

High quality envelopes have the following characteristics:

- A thin, sharply creased leading edge
- Paper weight of 75 g/m² (20 lb.)
- Flat, free of curls, wrinkles, nicks, etc.
- No cotton and/or fiber material included

Note:

- Wrinkles may occur in some cases, even if high quality envelopes are used.

We recommend that you do not use envelopes with any of the following characteristics (using these may result in paper jams):

- Irregularly shaped envelopes
- Envelopes with curls, wrinkles, nicks, twists, dog-ears or other damage
- Envelopes with side seam construction
- Highly textured envelopes, or with extremely shiny surfaces
- Envelopes that seal by removing a peel-off strip
- Envelopes with more than one flap to be sealed
- Self-adhesive envelopes
- Envelopes that are baggy or not sharply creased
- Embossed envelopes
- Envelopes that have previously been printed on

Do not attempt to print on any of the following types of envelopes (these may cause damage to your printer):

- Envelopes with clasps, snaps or tie strings (see Fig. 1)
- Envelopes with transparent windows (see Fig. 2)
- Envelopes that will melt, discolor, scorch, offset or release hazardous emissions when exposed to 200 °C (392 °F) for 0.1 second
- Envelopes that use encapsulated types of adhesive that do not require moistening but rely on pressure to seal them

Always test a sample of the envelopes you are thinking of buying. Confirm that the envelope performs acceptably.

For best printing results

- Avoid printing in high humidity i.e., above 70 %.
High humidity may cause the envelope to curl and pick up excess toner.
High humidity may also cause the envelope to seal.
- Avoid printing below 10 °C (50 °F) with less than 30 % relative humidity.
Low temperature with low humidity may cause light printing.
- Print only one envelope at a time.

Envelope storage is very important. Store them away from moisture and humidity, where they can lay flat and their edges will not be bent or damaged. The humidity should not exceed 70 % RH.

List of FCC requirements and information

If required by the telephone company, inform them of the following.

- FCC Registration No.:
(found on the rear of the unit)
- Ringer Equivalence No.:
(found on the rear of the unit)
- The particular telephone line to which the equipment is connected.

This unit must not be connected to a coin operated line. If you are on a party line, check with your local telephone company.

Ringer Equivalence Number (REN):

This REN is useful in determining the quantity of devices you may connect to your telephone line and still have all of those devices ring when your telephone number is called. In most but not all areas, the sum of the REN's of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.

In the event that terminal equipment causes harm to the telephone network, the telephone company should notify the customer, if possible, that service may be stopped. However, where prior notice is impractical, the company may temporarily cease service providing that they:

- a) Promptly notify the customer.
- b) Give the customer an opportunity to correct the problem with their equipment.
- c) Inform the customer of the right to bring a complaint to the Federal Communication Commission pursuant to procedures set out in FCC Rules and Regulations Subpart E of Part 68.

The Telephone Company may make changes in its communications facilities, equipment operations, or procedures where such action is reasonably required in the operation of its business and is not inconsistent with the rules and regulations in FCC Part 68. If such changes can be reasonably expected to render any customer terminal equipment incompatible with telephone company communications facilities, or require modification or

alteration of such terminal equipment, or otherwise materially affect its use or performance, the customer shall be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.

CAUTION:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.

When programming emergency numbers and/or making test calls to emergency numbers:

1. Remain on the line and briefly explain to the dispatcher the reason for the call before hanging up.
2. Perform such activities in the off-peak hours; such as early morning or late evenings.

This telephone provides magnetic coupling to hearing aids.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Toner life

Toner life of the included toner cartridge or KX-FA75 toner cartridge depends on the amount of content in a received, copied or printed document. We refer to the content as "image area". Because image area varies in actual usage, so does toner life. The following is the approximate relationship between image area and toner life for the included toner cartridge or KX-FA75 toner cartridge.

■ Toner life for the included toner cartridge or KX-FA75 toner cartridge:
